

Reverse nodes in K-group:-

$1 \rightarrow 2 \rightarrow 3 \rightarrow 4 \rightarrow 5 \rightarrow 6 \rightarrow 7 \rightarrow 8 \rightarrow 9$, $K = 4$

- Maintain $prevNode$, $nextNode$, $temp$, K^{th} node.
- Get the K^{th} node and set it as $prevNode$, and K^{th} next node as $nextNode$.
- Set K^{th} next node as null. Then reverse linked list from $temp$ to null.
- Set the $prevNode$ next = reversed nodes K^{th} node.
- Set $temp$ as $nextNode$, update $prevNode$. continue the process till $temp = null$.

$T.C - O(n)$

$S.C - O(1)$
