

Next Greater Element II:-

$$\text{nums} = [2, 10, 12, 1, 11]$$

2, 10, 12, 1, 11, 2, 10, 12, 1, 11 $\rightarrow$ hypothetical
 $\uparrow \uparrow \uparrow \uparrow \uparrow \uparrow \uparrow \uparrow \uparrow \uparrow$
10 12 1 11 12

2
10
12
11
~~2~~
~~10~~
~~12~~
~~1~~
~~11~~

$\rightarrow$ Logic is similar to NGE-I, the only thing changes is
traverse the array from $(2*n)-1$ and start filling
'ans' array when $i < n$.

$$TC \rightarrow O(2n + 2n)$$

$$SC \rightarrow O(2n + n) [\text{stack, array}]$$
