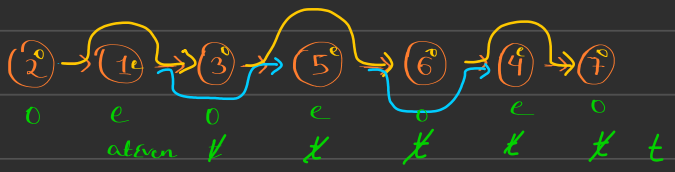
Odd Even Linked List :-



→ Take 4 nodes, odd, even, atEven, temp.

→ Maintain a counter.

→ If counter is even, do even.next = temp, else odd.next = temp

→ Connect the odd and even lists, and make even.next as null.

Basically, join last odd with current odd, and last even with current even, and in the end join both odds and evens.

TC - O(n)

SC - O(1)
